English Abstract

French Abstract

L'invention concerne un systeme de paiements virtuels pour commander des
biens, des services et du contenu par un reseau d'interconnexion. Le

Search Report from Ginger R. DeMille

systeme de paiements virtuels comprend un composant de passerelle commerciale (52) et un composant serveur de traitement de credits (53). Le systeme de paiements virtuels se presente comme un systeme sur et ferme comprenant des vendeurs et des acheteurs enregistres. Un acheteur devient participant enregistre en faisant une demande d'ouverture de compte de paiements virtuels. De maniere similaire, un vendeur devient participant enregistre en faisant une demande d'ouverture de compte de vendeur virtuel. Un acheteur peut instantanement ouvrir un compte en ligne grace au composant de traitement de credits (53) qui fait immediatement une evaluation de la demande de l'acheteur pour une carte de paiements virtuelle et attribue une limite de credit a son compte. Une fois le compte mis en place, un certificat numerique est stocke dans l'ordinateur du participant enregistre. L'acheteur peut alors commander un produit tel que des biens, des services et du contenu chez un vendeur, qui portera ces commandes sur le compte de paiements virtuels. Lorsque le produit est expedie, le vendeur en informe le composant de passerelle commerciale (52) qui, a son tour, informe le serveur de traitement de credits, qui porte le montant du sur le compte de paiements virtuel de l'acheteur. L'acheteur peut regler la somme due en utilisant un compte a paiement anticipé, un compte de credit ou des points bonus acquis grace a l'utilisation de la carte de paiements virtuels. Un acheteur peut creer des comptes auxiliaires.

Legal Status (Type, Date, Text)

Publication	20001228	A2 Without international search report and to be republished upon receipt of that report.
Examination	20010503	Request for preliminary examination prior to end of 19th month from priority date
Declaration	20011227	Late publication under Article 17.2a
Republication	20011227	A2 With declaration under Article 17(2)(a); without abstract; title not checked by the International Searching Authority.

Method for providing living information, product information and advertisement and making order and reservation by using internet and wireless mobile communication

Abstract (Basic):

... the living information, the product information and the advertisement and making an order and a **reservation** by using the **Internet** and a wireless mobile communication is provided to make a service provider take a profit by lending each page of an **Internet** site to an organization to provide the information and to make an information user to...

... The data, such as an address, a telephone **number**, a map, a price and a kind of a product or a service and the contents to notify, of the organization is stored in a **database** of the service **provider**. The user **searches** the data stored in the database by using the **Internet** or the wireless mobile communication(313). The data searched by the user is displayed on a terminal screen of the **Internet** or the wireless mobile communication(314). If the user selects one of the data, the detail information related to the selected data is displayed on the terminal screen of the **Internet** or the wireless mobile communication(319). If the user makes the order by selecting the **product** or the service **displayed** on the screen, the order is displayed on the **Internet** terminal or the service terminal of the organization(320...

Rental goods data processing system e.g. for video tape, transmits purport of reserved product to customer through e-mail, when returned product number corresponds to product number in stored reservation information

Abstract (Basic):

... A database stores product number and customer ID during a rental process. The reservation information of another customer for a particular product, is stored in another database. When the product is returned and if the returned product number corresponds to the product number in the reservation information, the purport of reserved product is indicated to the reservation customer through e-mail. After providing the product to the reserved customer, the reservation information is erased.
... As the reservation process is performed through network and the purport of rental goods is notified to customer, operation is performed correctly and...

Shopping for a PC DBMS Because they have grown in three major areas - power, ease of use, and connectivity - PC DBMSs are being used in applications....

Bryan, Marvin

Datamation , March 15, 1989 , v35 n6 p25, 28, 32+, 5 Pages

ISSN: 0011-6963

Discusses PC DBMSs. States that as a result of their power, ease of use and connectivity, PC DBMSs are being used in applications formerly **reserved** for mini- or mainframe-based software. It is estimated that sales of standalone PC DBMS products will have an 18 percent compound annual growth rate until at least 1992, and **database products networked** to DBMS **servers** will enjoy a 240 percent compound growth rate. Future potential capabilities of PC DBMS products are discussed in

Search Report from Ginger R. DeMille

the article. Includes a listing of 25 PC DBMS products that should be considered when a potential user is **looking** for DBMS software. **Product** name, **vendor** name, address and telephone **number** is included. A related sidebar article entitled ``Serving Up SQL **Servers** '' is included in the article. (RF)

PRODUCT NAMES: mySimon (755141); Bottomdollar.com (717533); Excite (594113); Yahoo! Shopping (767859); WebMarket (767867)

TITLE: Shopping Bots

AUTHOR: Cohen, Alan

SOURCE: PC Magazine, v18 n13 p35(1) Jul 1999

ISSN: 0888-8509

HOME PAGE: <http://www.pcmag.com>

RECORD TYPE: Review

REVIEW TYPE: Product Comparison

GRADE: Product Comparison, No Rating

Five shopping bots are compared. When a user visits a bot site and enters a **product** name as **search** criteria, the bot's agent searches the Web to find bargains. Although a good concept, the results delivered can be less than satisfactory. Sometimes the best deals are not located, and searches do not allow the level of precision now expected by Web surfers.

Bottomdollar.com **searches** all the larger **merchants** for multiple **search** categories, and allows results to be sorted by price. Although testers were able to find a good deal on a 3Com Palm IIIx, generally Bottomdollar.com returned many unsuccessful results and left the best deals unfound. Excite shopping has a limited **number** of categories, and does not look for books and music; Excite has partnerships with Amazon.com and CDnow. It does make searching easy for such categories as computer hardware, which is broken into subcategories, and testers located many good deals. My Simon gets the highest rating. Testers found that it queried over 1,000 sites, and worked better than other shopping bots to find the best deals. Many categories covering just about any item that can be purchased on the Web are provided. Users can search auction sites and classified ads, and all larger **merchants** are **searched**. Results can be sorted by price, and **book** searches can be limited to hardcover, paperback, new, and used. Also reviewed are WebMarket and Yahoo! Shopping.

REVIEW OF INTERNATIONAL COMPANY DATA BASES

US - REVIEW OF INTERNATIONAL COMPANY DATA BASES

Online Finance (OLF) 0 August 1988 p7

202-Nov-0402:35 PM

Search Report from Ginger R. DeMille

A 3-page article reviews the availability of international company databases in US. The services covered are: Copmark containing financial profiles of more than 9k publicly-held and 35k private corporations. The database is produced by Citishare and Standard & Poor and includes SIC codes. Corporate Affiliations, produced by National Register Publishing and on Dialog, contains financial and descriptive data on over 42.7k companies. Dun's Electronic Yellow Pages-Construction Directory is on Dialog and offers descriptive and mailing information on more than 622k construction agencies and contractors. Dun's Electronic Yellow Pages-Financial Services Directory consists of descriptive and mailing information on over 41k financial services providers in US. Dun's Electronic Yellow Pages offers basic descriptions of manufacturers, retailers, wholesalers, services and professionals. Dun's Market **Identifier** includes up-to-date information on 2 mil private and public companies with 10 or more employees or sales over USD1 mil. Duns' 'The Reference **Book** of Corporate Management' includes Bibliographic information on around 78k executives. Dun & Bradstreet's International Directory contains information on more than 160k private and public US companies with net value over USD1r500k. Disclosure **Online** contains information on some 12k publicly-owned companies filing information with Securities and Exchange Commission. The database is provided by IP Sharp, ADP, Mead, Dialog, Dow Jones, Compuserv, VU/Text, Warner and Quotron. MBenet has references to more than 20k businesses certified by the National Minority Supply Development Council as minority-owned. Moody's Corporate Profile has information on over 3.6k publicly-held US companies and is on Dialog. PTS Annual Reports Abstracts produced by Predicasts contains information on more than 40k companies. It is distributed on Data-star, Dialog and BRS. Spectrum Ownership Profiles of CDA Investment Technologies offers ownership information on 6k publicly-held corporations. Standard & Poor's General Information Profile contains descriptive information on more than 3k major US corporations. S&P also offers Register-Corporate database with descriptive information on around 45k corporations. The Thomas Register on Dialog gives information on 123k US manufacturers and **providers** of services. The **database** has more than 50k **product** classifications and 103k trade marks or brands. The Trinet Company Database provides information on around 250k manufacturing and non-manufacturing companies with more than 20 employees.

**Rx for success : ASD Specialty Healthcare opens 1st Internet site for
online auctioning of pharmaceutical products.(Company Business and
Marketing)**
Health Industry Today, v62, n11, pNA
Nov, 1999
Language: English Record Type: Fulltext
Document Type: Newsletter; Professional Trade
Word Count: 856

(USE FORMAT 7 FOR FULLTEXT)

TEXT:

Physicians, materials managers and health care **providers** looking to expand their scope of **Internet** services can now add pharmaceutical products to their **online** shopping cart. For the first time, **Internet** auctions of pharmaceuticals are being conducted following the introduction of Pharmabid.com by ASD Specialty Healthcare, Dallas. ASD, a division of Bergen Brunswig, launched the industry's first **Internet** pharmaceutical auction site for providers in late October. The Web address provides licensed health care providers and pharmaceutical purchasing agents with an electronic vehicle for bidding for pharmaceutical products **online**. Initially, the site will concentrate on biologicals, like plasma, and primary care products, like vaccines...

...and nephrology products. All of which makes the company an ideal candidate for expansion into **Internet** auctions. Providing an alternative "The web site is intended as an alternative to mainstream pharmaceutical...

...products, products that require refrigeration, injectables, and products with short expiration dates. "We see the **Internet** as an opportunity to create options to traditional marketing and sales routes at prices that...

...been very successful for us," says Herson. "At first we'll have about 50 products **online**, but the site is very durable & it could easily support 2,000-3,000 products...

...2 p.m. Eastern time in the English auction style, meaning ASD will set a **reserve** price that must be met or bettered. Bidders must first enroll with the Web site...

...Herson, is extended immediately. Turnaround time, or the time it takes to get a bidder **number** back to the customer so that auction activity can begin, takes only about an hour...
...50 initial products. We expect it to grow quickly & more and more people are going **online**." When a hospital materials manager or a physician office clicks **online**, the Web site is designed so that at the touch of the first screen a **viewer** will see the **products** offered and their prices. With the bidder **number** in hand, auction participants can log on, look at **product** descriptions, the quantity available and the **reserve** price. If a submitted bid is not the winning one, the participant is e-mailed...

(USE FORMAT 7 FOR FULLTEXT)

TEXT:

By Shuang Deng As **Internet** traffic continues to double every six months, it's the **Internet** service providers that ultimately feel the pressure. Millions of business users have placed heavy demands...

...hour availability and high-speed access required for bandwidth-intensive applications as consumer demands for **Internet** access also escalate. This market wants the convenience of television, the reliability of the telephone...

...connections work together seamlessly and transparently. These include client applications, data conversion algorithms, modems and **servers** that transmit information and last-mile infrastructure such as fiber optic cable and copper wire...

...quality enhancements and performance boosts. This difficulty is compounded by the dynamic nature of the **Internet** services market, which continues to render cutting-edge technologies obsolete almost overnight. The frantic pace...

...information technology department to the breaking point. Furthermore, ISPs that build and maintain their own **networks** are forced to undergo continual, costly equipment upgrades to keep pace with industry innovation. Many of these upgrades result from changes in modem technology, access equipment and **network** transport systems. As the complexity and frequency of these transformations increase, addressing diverse user needs...

...even more time-and resource-intensive. As a result, many ISPs want to outsource their **network** management responsibilities to third-party wholesalers so that they can remain focused on their core competencies: customer service and **on - line** content. The trend toward wholesaling While many large companies continue to manage both the **network** and content components of their **Internet** services, others are deciding that these functions are too vast, complex and specialized to manage...

...product and service offerings-and vice versa. Companies with strategies that address every layer of **Internet** capability-from backbone technologies to application delivery **vehicles** -may **find** their internal resources exhausted and their market position weakened. This is because each of these...

...This resource drain helps explain why many ISPs and corporations are beginning to outsource their **network** management functions to wholesalers-in effect, divesting their infrastructure business so that they can focus...

...deliver value-added services, improve reliability and capability by leveraging co-located equipment, and reduce **network** access costs by capitalizing on the economies of scale offered by wholesalers. The trend toward...

...measures. A recent survey of ISPs by Business Week found that Mindspring, EarthLink and America **Online** delivered better performance to investors than powerhouses such as Dell and Microsoft. This performance can ...

...services. A win-win situation Both wholesalers and retail ISPs are benefiting from the wholesale **Internet** access model. On the wholesaler side, carriers are discovering that these services help them obtain greater revenues from their existing infrastructures-in essence, serving a greater **number** of customers through a focused technology investment. Sharing deployment, development and maintenance costs among a...

...benefits for wholesalers represent the flip side of those for service providers, in that wholesaling **Internet** access lets them concentrate on technology issues without expanding into costly-and often unfamiliar-content...

...large carriers such as Sprint and MCI WorldCom, which have the breadth of in-house **networking** expertise needed to deliver reliable, scalable **network** services. Because these carriers are grounded in infrastructure development, deployment and maintenance, they have a...

...and economic factors driving the industry. In addition, these carriers are familiar with the wholesale **Internet** access model because many had to make similar strategic decisions during the growth and deregulation...

...traditional voice-based telephony market. For carriers with experience in selling wholesale voice access to **providers** of co-located Centrex and premises-based PBX services, a wholesale **network** offering for data communications constitutes a logical next step. Figure 1 depicts a typical architecture for deploying wholesale **Internet** access. The service provider assumes responsibility for connectivity to the **Internet** backbone and for the components traditionally associated with modem outsourcing. This includes public **network** connectivity, dial-in switches and connections to the ISP's resources. Traffic bound for the **Internet** is routed via the service provider's links, bypassing the ISP's resources altogether. ISP...

...a result of user authentication functions directed to the ISP's authentication, automation and accounting **server** is routed normally. Because an estimated 90% to 95% of dial-in user traffic is destined for sources on the **Internet** (and not the ISP's **network**), this architecture

significantly reduces an ISP's required **Internet** access bandwidth. This model allows wholesalers to provide a dedicated, transparent **network** to ISPs and their customers. End users still dial into their ISP and are unaware of the **network** service provider's involvement. For the wholesaler, dial-in users appear as part of the service provider's **network**, thus enabling the wholesaler to monitor usage and service more effectively. This "**Internet** direct" architecture also allows the wholesaler to offer enhanced services to an ISP without requiring...

...ISP to maintain control over content. The wholesaler can also extend its services to include **Internet** fax capabilities or enhanced voice-over-IP services such as **Internet** call waiting that the ISP can offer to its end user base, thereby generating additional...

...depends heavily on the quality of service it delivers, an ISP looking to relinquish its **network** development and management responsibilities still needs to maintain control over its customer contacts. The ISP...

...service activities must be conducted through the ISP so that it can deliver seamless, transparent **network** access to its subscriber base. Wholesale ISP capabilities must also enable the **network** service provider to differentiate its customers and services effectively. Applying various service policies to different...

...provider to cater to the evolving needs of an ISP while maintaining control over its **network** resources. This need to retain critical forms of control for both the ISP and wholesaler necessitates a feature-rich **network** access solution with robust functionality—one that is capable of satisfying end user, ISP and wholesaler requirements. Today's carrier-class **network** access **servers**, in conjunction with policy management software, provide the critical layer of **network** intelligence and management necessary to deliver the strategic solutions that today's high-density, high-volume **Internet** services market requires. This technology addresses these requirements on a **number** of levels. Port allocation. Wholesale **network** access solutions can maintain a view of all calls, as well as enforce an ISP's total port quota across the **network**. This ensures that the ISP optimizes usage for all virtual modem ports, while preventing overuse of the **network**. Overflow quotas. Quotas enable ISPs to exceed their base subscribed port limit temporarily and generate...

...overflow quota for individual phone groups or across multiple phone groups. Authentication and authorization. Wholesale **network** access solutions can be configured to allow individual ISPs to have different authentication and authorization **servers**. As each user dials in to the **network** access **server**, the **network** access **server** sends a Radius authentication request to the **Internet** protocol address corresponding to the ISP's primary Radius **server**. Accounting. Wholesale **network** access solutions can also help streamline the ISP's end user accounting function. Each **network** access **server** can be configured with the ISP's account **server** information, enabling the **network** access **server** to generate "accounting start" and "accounting stop" messages to the IP address during start-up and release activities. IP address allocation and pool management. Wholesale **network** access solutions offer many options for IP address allocation and pool management, including assigning IP addresses from a global **network** access **server** pool, the ISP's IP pool or other **servers**. The explosion in **Internet** usage has complicated the maintenance and management of home-grown **networks**. Constant upgrades, new product

Advanced Communication, intouch take different approaches to music kiosks.
Electronic Marketplace Reports, v9, n4, p2(1)
Feb 21, 1995
LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT
WORD COUNT: 1187 LINE COUNT: 00091

TEXT:

Two leading **kiosk** developers are taking radically different approaches to staking out retailers and consumers in the music...

...much information about the user to grow its marketing might, while Advanced Communication Design is **looking** to win user and **retailer** trust by capturing the least user information necessary. To avoid putting off consumers, Advanced Communication Design has developed a music and video ordering **kiosk** that collects minimal user data. Rather than selling the data to marketers, ACD allows retailers to determine its use, president Marco Scibora told EMR. The ordering **kiosk**, which ACD calls a voice/video information center, is an extension of previewing **kiosks** the company has developed for retailers since 1987. A previewing **kiosk** allows potential buyers to listen to audio samples. The new **kiosk** allows retail customers to **search product databases** and reviews as well as place an order. Retailers utilizing ACD's previewing **kiosk** include a wide variety of **book**, music and mass merchant retailers, including Barnes & Noble and Tower Records. While Scibora wouldn't disclose the retailers likely to be the first to buy the new **kiosks**, he said they are existing customers. The

Search Report from Ginger R. DeMille

kiosk contains an electronic version of the Schwann database, which consists of more than 120,000...

...wrapping, and enclosing a card with a personalized message. Accessible To All ACD designed the **kiosk** so that anyone can access the information and place an order, making it very different from a competitive **kiosk**, the iStation. In order to operate the iStation preview **kiosk**, users need to apply for membership cards which must be inserted into the **kiosk** (EMR, May 24, '94). ACD sees membership programs as "the biggest obstacle" to usage, according...

...to carry out a transaction. People should have the freedom and opportunity to use the **kiosk** if they want to, he said. ACD (Minneapolis, MN) lets retailers generate reports that show general demographics and regional buying trends for their **kiosks**. For example, a report may indicate that jazz titles sell well in southern New Jersey...

...Retailers and record companies can cross-promote and run marketing specials for products in the **kiosk**. For example, a promotion or listing for a CD may include an ad that directs...

...to the CD player department at the retail store. Cross-promotions and advertising on the **kiosk** is handled by the retailer. **Kiosk** systems can also be configured to print out coupons. Prices for ACD's ordering **kiosks** depend upon the **number** of sampling stations and features included. For example, three sampling stations on one system configured to take orders is priced at about \$8000, Scibora said. **Looking Beyond Music Retailers** While ACD is targeting in-store music retailers, the company has also set its sights...

...be a \$20-\$30 million business, Scibora said. One plan being considered is free-standing **kiosks** in public areas, such as malls. However, ACD needs to be careful not to compete...

...music retailer has a mall storefront, ACD may ask the retailer to participate in the **kiosk** program. One possible set up would call for the retailer to make an investment in the **kiosk** and share some of the profits, he said. iStation: A Marketing Machine While some consumers...
...at the iStation's data collection strategies, something must be said for the qualified marketing **database** it builds for **product** marketers. intouch (San Francisco, CA) is developing integrated marketing programs with advertisers and sponsors of...

...designed to drive the user into the store where the original preview occurred. A bar **code** included on the postcard allowed user to scan the postcard at the iStation at the...one optical drive that holds 15,000 albums is priced at \$150 per month; a **kiosk** with four optical drives that holds 60,000 albums is priced at \$350 per month. At the end of 1994, intouch had distributed 314 **kiosks**. The company expects to have over 1300 **kiosks** in distribution by the end of 1995. intouch has also found plenty of consumers willing...

INFORMIX ADDS MS-DOS INTEGRATION WITH UNIX, BOASTS OF TURBO
PERFORMANCE Relational **database vendor** Informix Software Inc, Menlo
Park, California, made a series of announcements last week, including the
addition of Informix NET-PC, a **network** module which enables the Informix
user **interface** on MS-DOS boxes to communicate with Unix database
reserves across TCP/IP **networks** . It enables applications to be
off-loaded onto personal computers, with the Unix machine used as a
database **server** . Informix NET-PC can be used only via TCP/IP protocols
provided by Sun Microsystems' PC- **Network** File System, over Ethernet or
RS-232C lines - cost is \$200 per MS-DOS machine...
...sold distribution rights for its Smart software range to British
Olivetti fo k. Unix and **networking** versions of Smart are now available,
as well as those for MS-MOS and Xenix - all have the same user **interface** .
And the Informix-Turbo transaction processing database engine, running a
TP1 benchmark test, is claimed to have achieved the highest **number** of
transactions per second recorded to date on a Unix-based supermicro: 126 on
a...

...to take control of Informix's European operation. Goldman is promising
"the arrival of new **products** that will exploit the integration of
database and large objects such as text and graphics."

TEXT:

...create a pocket-sized mobile computer capable of sending faxes, receiving email and browsing the **Internet** anywhere in the world, all in one compact, lightweight unit. The deal failed because the...

...companies could not agree a price. Nevertheless, the competition to create devices genuinely capable of **Internet** surfing has continued to hot up. There have been significant developments in the three key...

...but users will have to wait a little longer before being able to surf the **Internet** at 115.2kbps using their mobile phone handsets. "The solutions that will be rolled out...

...slot and receive in three," says Pekka Pohjakallio, head of product marketing for wireless data **server** systems at Finland's Nokia Telecommunications. The key advantage of GSM2+ is that it will...

...services without having to go to the time, trouble and expense of fully upgrading their **networks** immediately. In the meantime they can trial new services and, if they prove popular, can bring forward their plans for a full **network** upgrade. But **Internet** browsing via any GSM **network** will still be an expensive process because of the way it works. "It is a circuit switched **network**, like the telephone **network**, which means that you set up the call and that call is open whether you...

...and replace their GSM systems with third generation packet-based

technology. Using a technique called **code** division multiple access (CDMA), it works by assigning a wide band of frequencies to several calls. Each call is assigned a unique **code** which ensures both the correct connection and greater security than with analogue or GSM services...
...power control, which further increases security. "The trick to making CDMA work is that the **network** needs to be able to control the power of all the local transmitters and it...Dr Lim's brief at LG Electronics is to develop a blueprint for global mobile **Internet** access, but he believes there are still some issues to be resolved. "To implement the mobile **Internet** concept, there are a few technologies to be developed such as standardisation of **Internet** protocol address conversion ... and standardisation of roaming control," he says. In addition, a **number** of other practical problems at the user end also need to be addressed to make **Internet** surfing via a mobile phone as easy as it is with a desktop PC. "It's complex to configure and typically when you get into **Intranet** applications, they are not written with the wireless environment in mind," says Davison of Ovum. **Database vendors** Oracle and Sybase have, however, already begun to produce **database** front-end **products** for mobile workers. For Sybase, growth of the mobile computing database market is one of...

...could wreak havoc on a user trying to download a 10Mb file. "There are a **number** of things you can do to get round this, typically in various types of middleware...

...will allow mobile phone users to send and receive emails directly through the cell phone **network** without the need of an **Internet** service provider. Other, more feature-rich services should quickly follow. UK operator Cellnet is developing a system to enable users to **book** and pay for airline seats over its **network**. Another UK operator, Orange, wants to offer customers a personal phone **book** and appointments diary, which could render two of the most popular functions of handheld computers...only 9.6 kilobits per second, making it unsuitable for 'any time, any place, anywhere' **Internet** surfing. GSM2+ Before the end of the year, GSM2+ upgrades to existing GSM systems should...

...way to third generation CDMA-based systems early in the next century (see below). CDMA (**Code** Division Multiplexing Access) CDMA is a packet-based system which sends voice and/or data...

...and TDMA-based systems. To ensure call security, CDMA assigns a one-in-four trillion **code** to identify each call. This system makes sure a caller can only pick up the...

...principally that it does not work while travelling at speed, make it unsuitable for mobile **internetworking**. The plummeting cost of standard digital cellular systems - unforeseen when PHS was launched in July...

TEXT:

...research at IDC, told the IT marketers Global Summit in Istanbul last month that the **Internet** was "vastly underhyped", his point was greeted with muted assent by an informed audience. What came next was more dramatic: he argued that the use of **Internet** technologies to automate business processes was going to have the most radical, profound and revolutionary...

...not much out of line with those many people forecasting a huge role for the **Internet** in information distribution and commerce. But he was not making general forecasts about the global **Internet** alone, but rather about the impact of **Internet** based technologies on businesses, their systems and their organization. These technologies are largely internal and 'semi-internal' systems, such as **intranets** and **extranets**, and systems for supporting the automation of customer relationships. All of these, he...

...enter, usually through a Web site, into a company's operational systems and conduct a **number** of transactions such as ordering, buying and selling. By implication, a whole tier of clerical...

...staff could disappear as key activities related to buying and selling transactions are carried out **online**. "The whole idea is of turning the terminal around [to face the customer]," says Jo Alsop, CEO of **Internet** software development tools supplier Progress Software. "All the stuff that was back office or front..."

...up a stream of business. Don Berman, technology specialist with New York based consultancy Client **Server** Solutions, raves about the **number** of companies approaching him in the scramble to Web enable their legacy systems: "It is..."

...for automating the customer is being drawn from three distinct sources. First, there is the **Internet**, with its many de-facto technical standards, its low cost, continuously available **networking** infrastructure, and its established client interfaces. There is also a growing **number** of products, such as Microsoft's Merchant **Server**, which support commercial transactions on a specialist **server**. Second, many companies, especially larger ones, will utilize the systems and the infrastructure they have...

...using EDI. EDI involves establishing direct computer-to-computer links between organizations over wide area **networks** - for example, for the exchange of sales orders, invoices, technical documents and the like. EDI ...

...and legal, for linking back-end systems to customer's systems. In many respects, EDI **networks**, made up of closed groups of customers, are a precursor to what are now called...

...new market. All the major applications software vendors (such as SAP, Oracle and PeopleSoft), the **database vendors** (Oracle, Informix, Sybase), and many, many development tools vendors are now offering

software to speed up the development of **Internet** and **intranet** systems. Some **Internet** Service Providers (ISPs) are also offering to support sophisticated trading systems. OPPORTUNITY

Early experience in **Internet** based trading has been patchy, with consumers showing reluctance to consummate their relationship with the Web by buying goods. IBM, for example, closed its **Internet** shopping mall because of insufficient transactions, even though the site received a high **number** of visitors. Even America **Online**, the high profile, consumer-oriented service provider, reports that its most successful item sold **online** is greetings cards. But against this, there are some examples of hugely successful initiatives, with...

...with the back-end fulfillment systems. Predictably, high technology companies have taken a lead in **Internet** commerce. Cisco Systems, the supplier of **networking** equipment, is an example. It has set up a link from its Web site into its ordering system, allowing customers to configure and order products **online**. The process was simplified because the ordering system was already highly computerized. In addition, the...

...relative lack of legacy systems means they have the option of setting up standalone trading **servers**, based on packages such as Lotus Domino, Netscape's Commerce **Server** or Microsoft's Merchant **Server**. These may then be linked through simple message queuing or file transfer (ie, offline or...

...contractual problems, especially towards the end of contracts. There may also be difficulties getting good **online** access to management data, such as the **number** of attempted accesses to pages. Colin Hume, a software designer experienced in linking Web sites...

...system on the Web is a specialist job. Designing interfaces between a database and Web **server** is difficult." It should not be compared with the easier job of maintaining a Web...

...a substantial back-end and operational systems in place, the issues multiply. While customizing an **Internet server** system to enable Web transactions is straightforward, actually allowing customers access into a back-end...

...with difficult technical and business hurdles. The most common method is to deploy a Web **server** as a gateway between the customers and the back-end system. One of its primary...

...databases. This can be relatively straightforward, or extremely complicated, largely depending on the design and **number** of back-end systems, and on the need for real time transactions. Typically, the appropriate data fields from the business application are routed through a common gateway **interface** (CGI) and translated using scripting language into HTML. Alternatively, specialized interfaces may be developed. There ...

...numbers of customers, may have to be added.

SAVINGS The cost of developing a significant, **online** trading system linked in real time to operational systems may ultimately prove to be higher business processes. In 1995 it set about building a Web-based extranet, a **network** accessible only to chosen partners, called the Trading Process **Network** (TPN) and designed to link up corporate buyers and suppliers. According to Gary Hare, vice...

...50% and costs by 30%. One of the savings has been the reduction in the **number** of personnel needed. Hare estimates that the cost of sending out contract information to potential...

...Web site and invited to put in tenders via the site. Before TPN, the average **number** of suppliers vying for a contract was three, now the **number** can be as high as 150 from all over the world.

TOOLS Two years ago...

...software packages which are additions to, or extensions to, existing software development tools. Second, the **database vendors** have developed a variety of specialist tools, including those to translate SQL forms to HTML...

...the big applications vendors, such as SAP, Oracle and PeopleSoft, are developing methods to support **intranet** access into their software. Finally, there is a range of new software emerging to support...

...Crowe asserts that Web enablement "is easy. It's the rest that is very difficult". **Database vendors** Oracle, Sybase and Informix are all designing their products for Web enablement over the **Internet**, extranets and **intranets**. Sybase has upgraded its SQL **Server** for Windows NT to include tools to build and manage content in both databases and...

...3 package illustrate the problems. After suffering some criticism for its slow adoption of the **Internet** in 1996, it has since launched not just one **Internet** enablement tool, but a raft of 125 Web-enabled front-ends, designed for a range...

...to retail. In addition, it is still working on adapting its core system to support **intranets**. The availability of these tools has not, so far, inspired a frenzy of user activity...

...is no customer demand, he says. One type of software is clearly attracting considerable interest - **Internet** merchant commerce **servers** from Microsoft, IBM, Netscape and others. These have sold well as general purpose **Internet servers** - the question is whether they are robust enough to support large scale transactions. Not according to Bob Chatham, senior analyst with Forrester. He describes merchant **server** products as being at the "kindergarten" stage. "For cataloguing and basic transactions they are alright..."

...how to avoid getting locked into a proprietary browser technology. For example Netscape's enterprise **server**, which generates HTML pages for a Web site, uses proprietary HTML tags, not those conforming...

...TAKE OFF Although there are significant technical obstacles, big business is clearly planning to adopt **Internet** technologies. A survey carried out by Forrester Research found that 66% of Fortune 1,000 intend to conduct business on the **Internet** within two years. And recent research by management consultancy Ernst & Young revealed that of 130 US financial companies surveyed, 87% are planning to introduce transaction processing (automation) on the **Internet**. Forrester predicts that two major trends will set the course for investment: merchant **servers** will become more robust and suitable for **Internet** commerce; and communities of commerce will emerge and reshape how buyers and sellers interact. Michael Sullivan- Traynor, industry analyst and author of a **book** Cyberquake which attempts to map out the landscape of an automated society

TEXT:

...of their employer based on the ... mountains of electronic information
available to them."

The open- **book** corporation emerges. Hoarding corporate secrets will no
longer be the done thing in the Net Future. The **Internet** will again turn
conventional wisdom on its ear as it becomes accepted that power will be in
knowledge dissemination, not knowledge collection. Martin writes, "An
increasing **number** of companies will find that by opening their databases
to the world, as FedEx and...

...do much of the work. Moreover, customers and suppliers love it! Taking a
company's **intranet** to the next logical step--allowing customers to get
the information they need more quickly by directly accessing the corporate
database --benefits both customer and company."

Products become commodities. This cyber trend applies to the way products
are priced. As consumers are increasingly...

...products from suppliers all over the globe, as well as to bid on them at
online auctions, they will drive product pricing with their freedom to
walk away and find a...
